

Ways You Need Help With Overuse & Patient Safety You *Probably* Didn't Even Know About

You wouldn't

dream

of flying in a plane that didn't have a reliable and useful navigation system...

Patients cannot

dream

of giving informed consent without key information...

The *frequent* use of medical science that is **not reliable** +/- or **not clinically useful** causes *significant* patient harms, waste & missed chances for right care. This is worsened by *typical* clinician communication gaps.

Patient safety, overuse, waste & missed opportunities for right care **cannot be resolved** without addressing these well-documented, yet **largely ignored** problems.

Contact us. We can help you solve this vitally important and part of the puzzle you are likely missing out on...
