

DO YOU NEED HELP WITH OVERUSE & PATIENT SATISFACTION?

Many health care providers over use procedures and therapies. Because of this, many patients suffer unnecessary morbidity. We all pay for the resulting waste.

Many of your patients are not getting the information they need to make a truly informed decision.

Many of these problems stem from **inadequate training** of health care professionals in evidence interpretation and their inability to communicate the information patients most need.

WE CAN HELP.

We have decades of experience restructuring health care systems to improve clinical quality and in training health care professionals and groups (e.g., P&T committees) in evidence-based clinical improvement techniques and patient communications. We have helped patients, payers and providers, governments and universities, and more.
